

# GN 4800

## Increased productivity. Desk and IP telephony.

The GN 4800 is an innovative office headset that provides seamless integration between your PC and traditional telephone. Use it to create your personal workspace and be more productive – work hands free, listen to streaming music and use the telephone – all with a single headset. It also provides a smooth migration path to IP telephony making it a future-proof investment.

- Increased productivity and job satisfaction in a noisy work environment
- One headset for streaming music and telephony
- Future proof IP telephony investment
- Never miss another call
- Choice between hi-fi stereo and wideband stereo quality headsets

In today's open office environments, unwanted noise can decrease productivity by up to 20%.\* Not surprisingly, more and more employees are streaming music to block out the sounds of photocopiers, loud colleagues and other annoyances. That means when a call comes in, people take off their headphones and pick up the handset, assuming they hear their telephone ring at all. The GN 4800 solves all these problems by seamlessly integrating computer applications and telephony as well as providing the freedom of working hands free all the time.

### The GN 4800 is available with two different headsets

GN 4800 Hi-Fi provides high-fidelity stereo audio performance and has a noise-canceling microphone for crystal clear communications in noisy working environments. Also offered is the durable, dual-use GN 4800 Wideband with true IP bandwidth (150-6800Hz) and solid stereo quality.

The GN 4800 is true plug 'n' play and it is Microsoft Windows® compliant.
